What I'll cover

- Who, Why, When, Where & How of MEASURE Evaluation
- Challenges
- Focus on Evaluation
- Springboard to One Health

Why MEASURE Evaluation?

Distribution of Funding for Programs in the U.S. Global Health Budget, By Sector, FY 2001-FY 2013*

*FY 2012 are final estimates; FY 2013 is President's Budget Request to Congress.

NOTE: Global Health Initiative (GHI) funding only. The GHI was created as an initiative in FY 2009. All prior years represent the same programs and accounts which were not yet referred to as the GHI.

SOURCE: Kaiser Family Foundation analysis of data from the Office of Management and Budget, Agency Congressional Budget Justifications, Congressional Appropriations Bills, and U.S. Foreign Assistance Dashboard [website], available at: www.foreignassistance.gov.

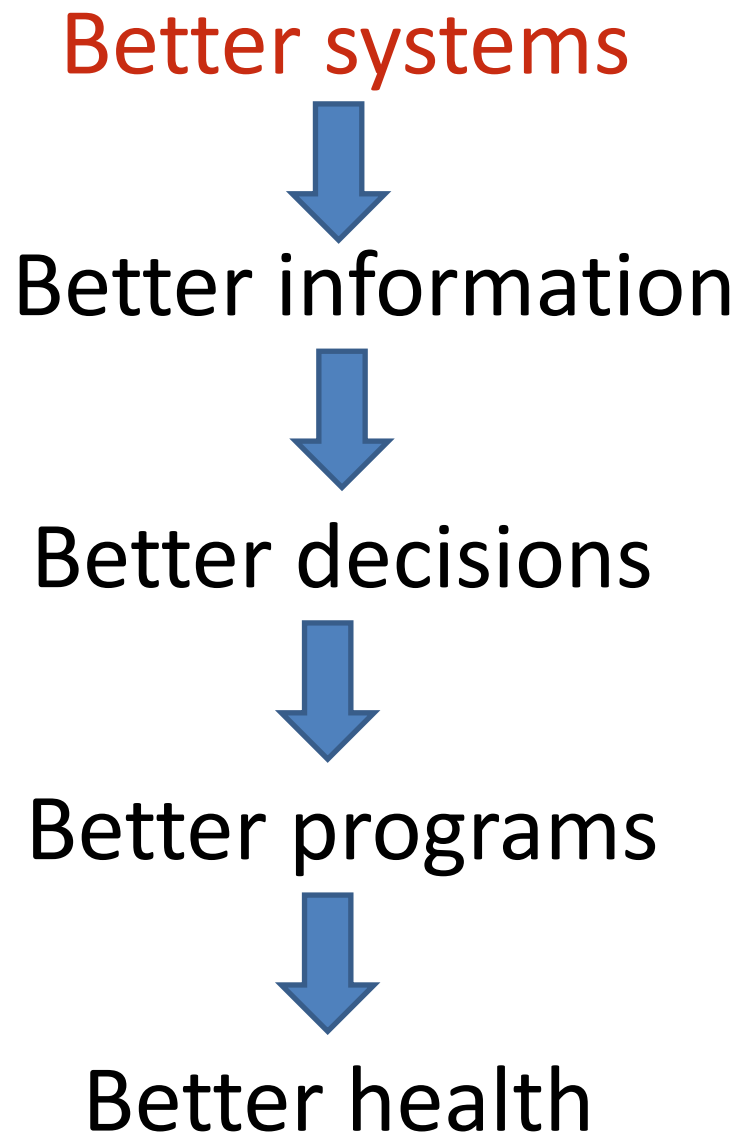

Why MEASURE Evaluation?

- Accountability for donations
- Enabling data-based decision-making

Our goal:

To strengthen health information systems
so countries can make better decisions and
sustain good health outcomes over time.

Why MEASURE Evaluation?

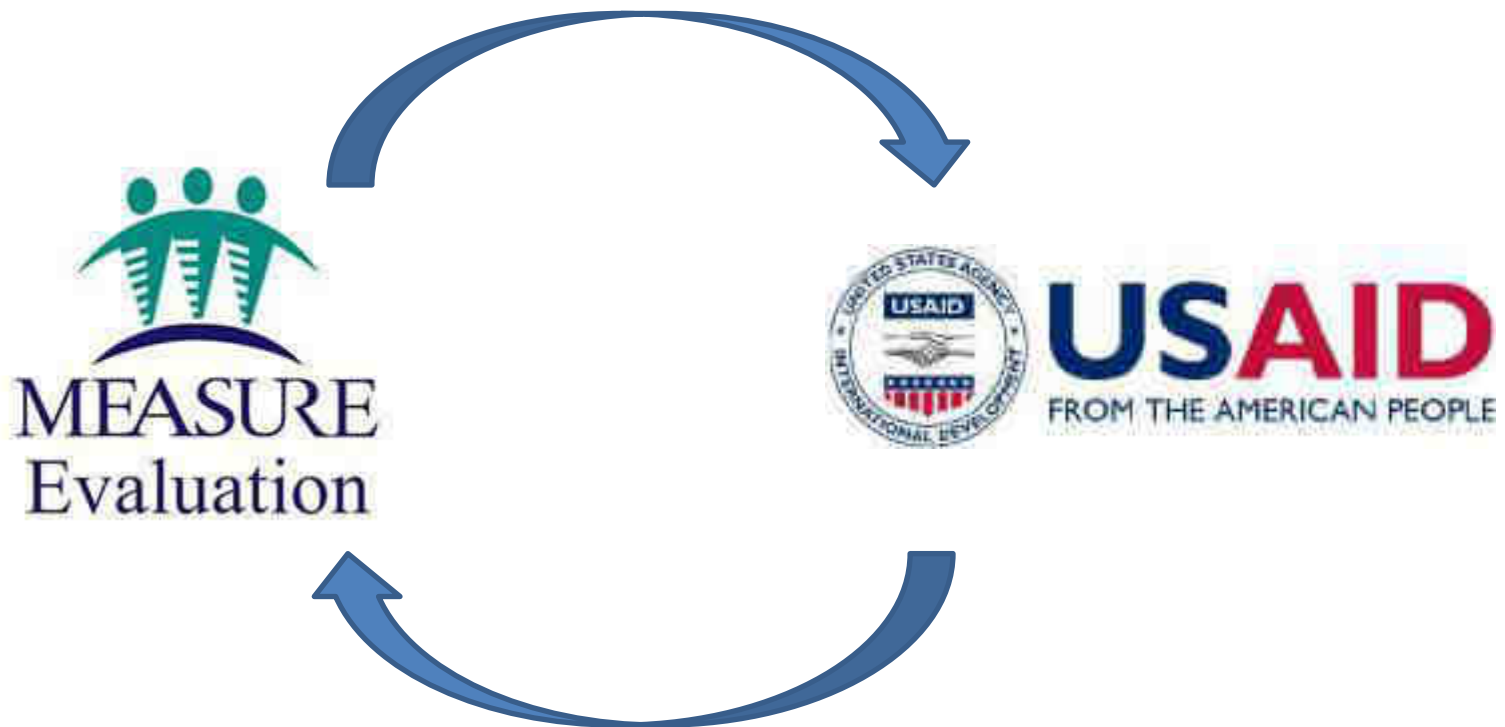

What MEASURE does

Figure 1. Organizing Framework for a Functional National HIV M&E System – 12 Components

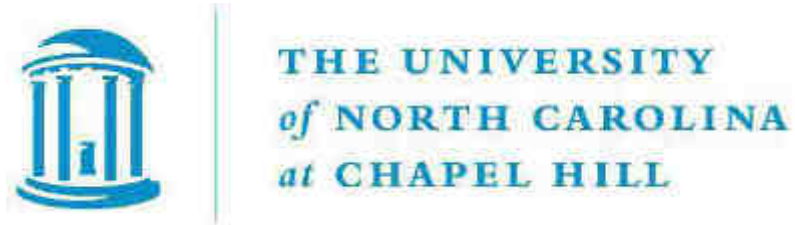

Who is MEASURE Evaluation?

Cooperative agreement

Who is MEASURE Evaluation?

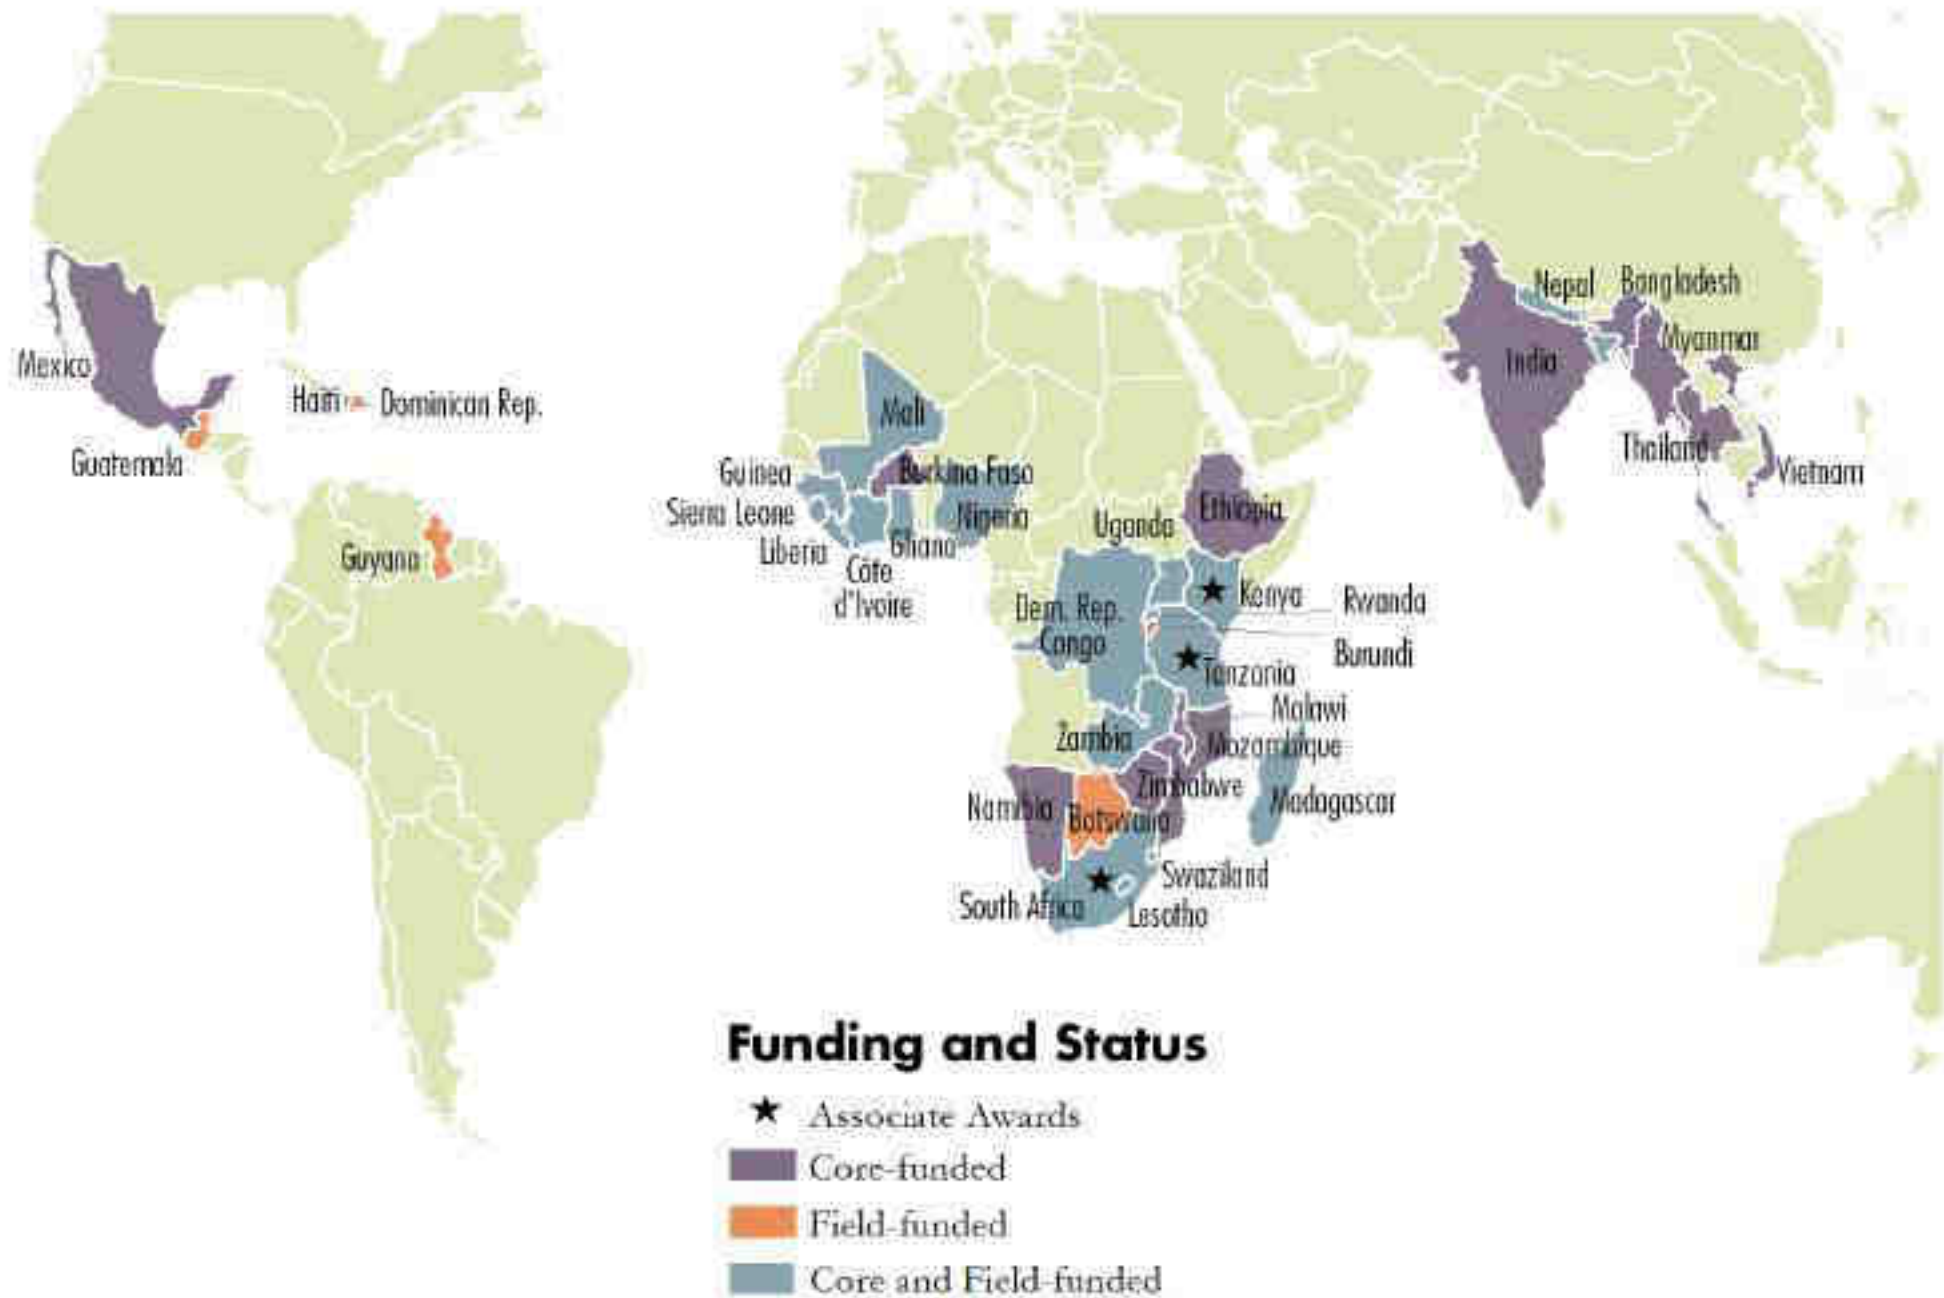

Partnership

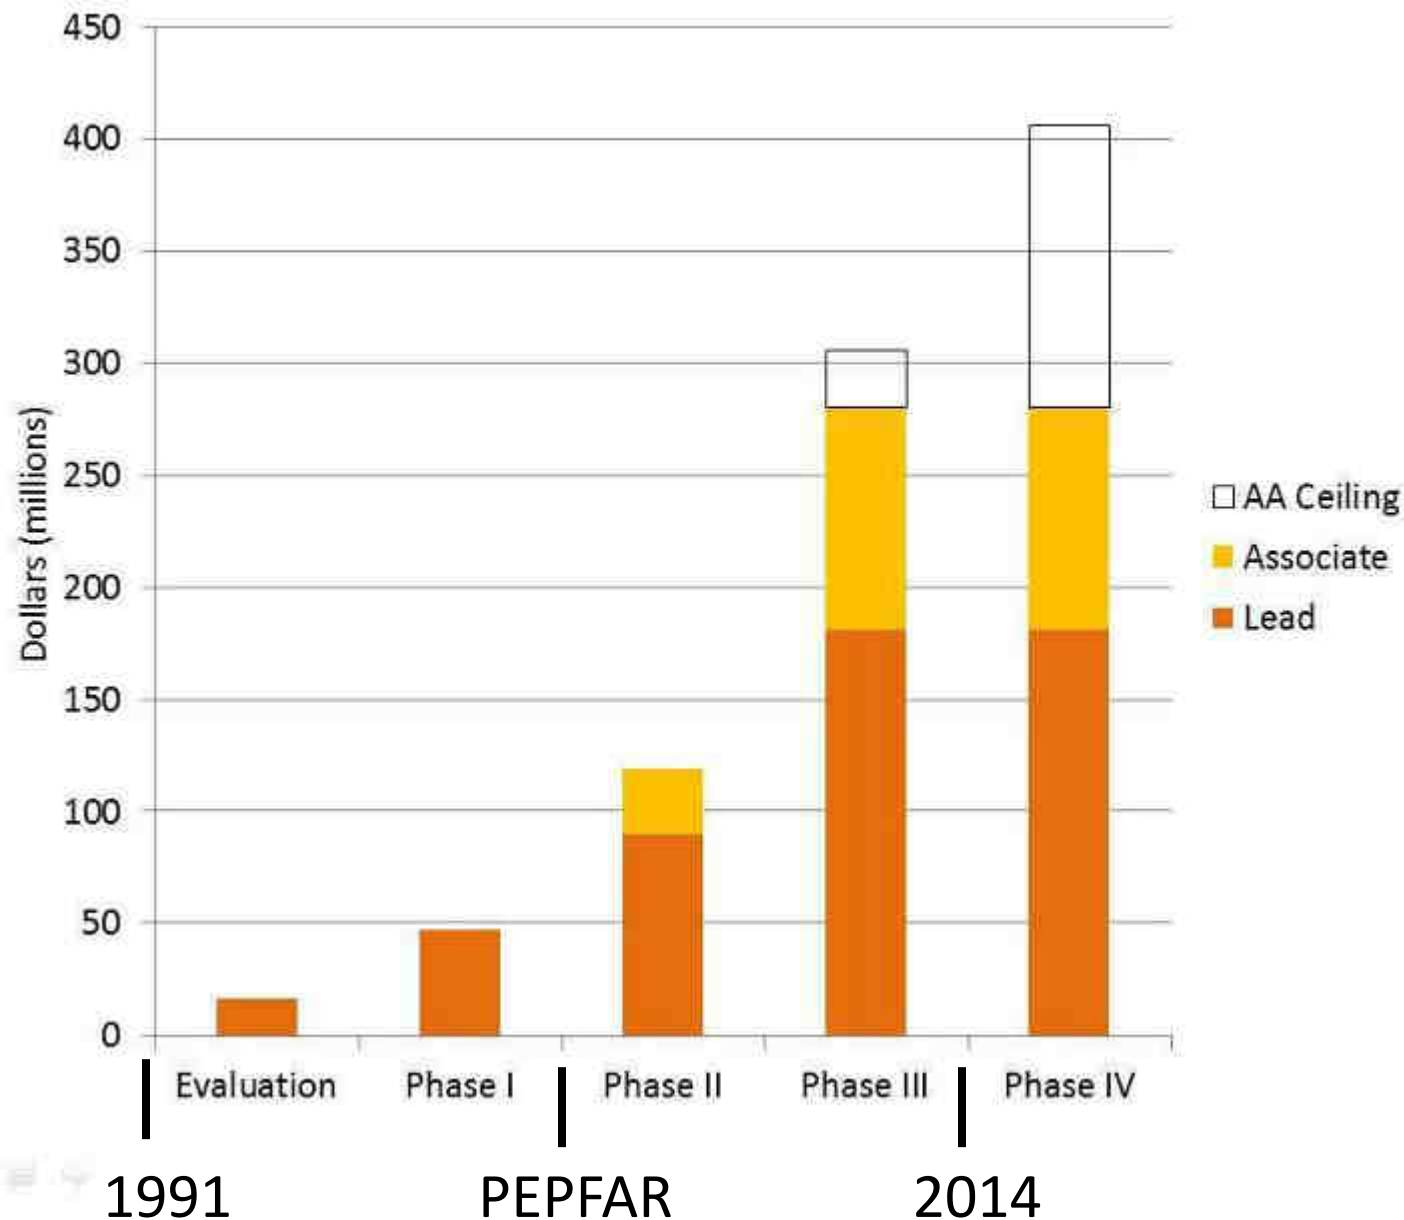

Who is MEASURE Evaluation?

Where is MEASURE Evaluation?

When was MEASURE created?

When did MEASURE do what?

Phase I	M&E for family planning
Phase II	HIV indicators, tools, & approaches
Phase III	Building capacity to use the tools and approaches
Phase IV	Strengthening health information systems

What MEASURE does now

Results framework

1. Strengthened collection, analysis, and use of **routine health data**
2. Improved country capacity to **manage health information systems**, resources, and staff
3. **Methods, tools, and approaches** improved and applied to address health information challenges and gaps
4. Increased capacity for **rigorous evaluation**

What MEASURE does

Health areas

- HIV/AIDS
- Malaria
- Tuberculosis
- Nutrition and food security
- Ebola
- Neglected tropical diseases
- Zika?

What MEASURE does

Areas of expertise

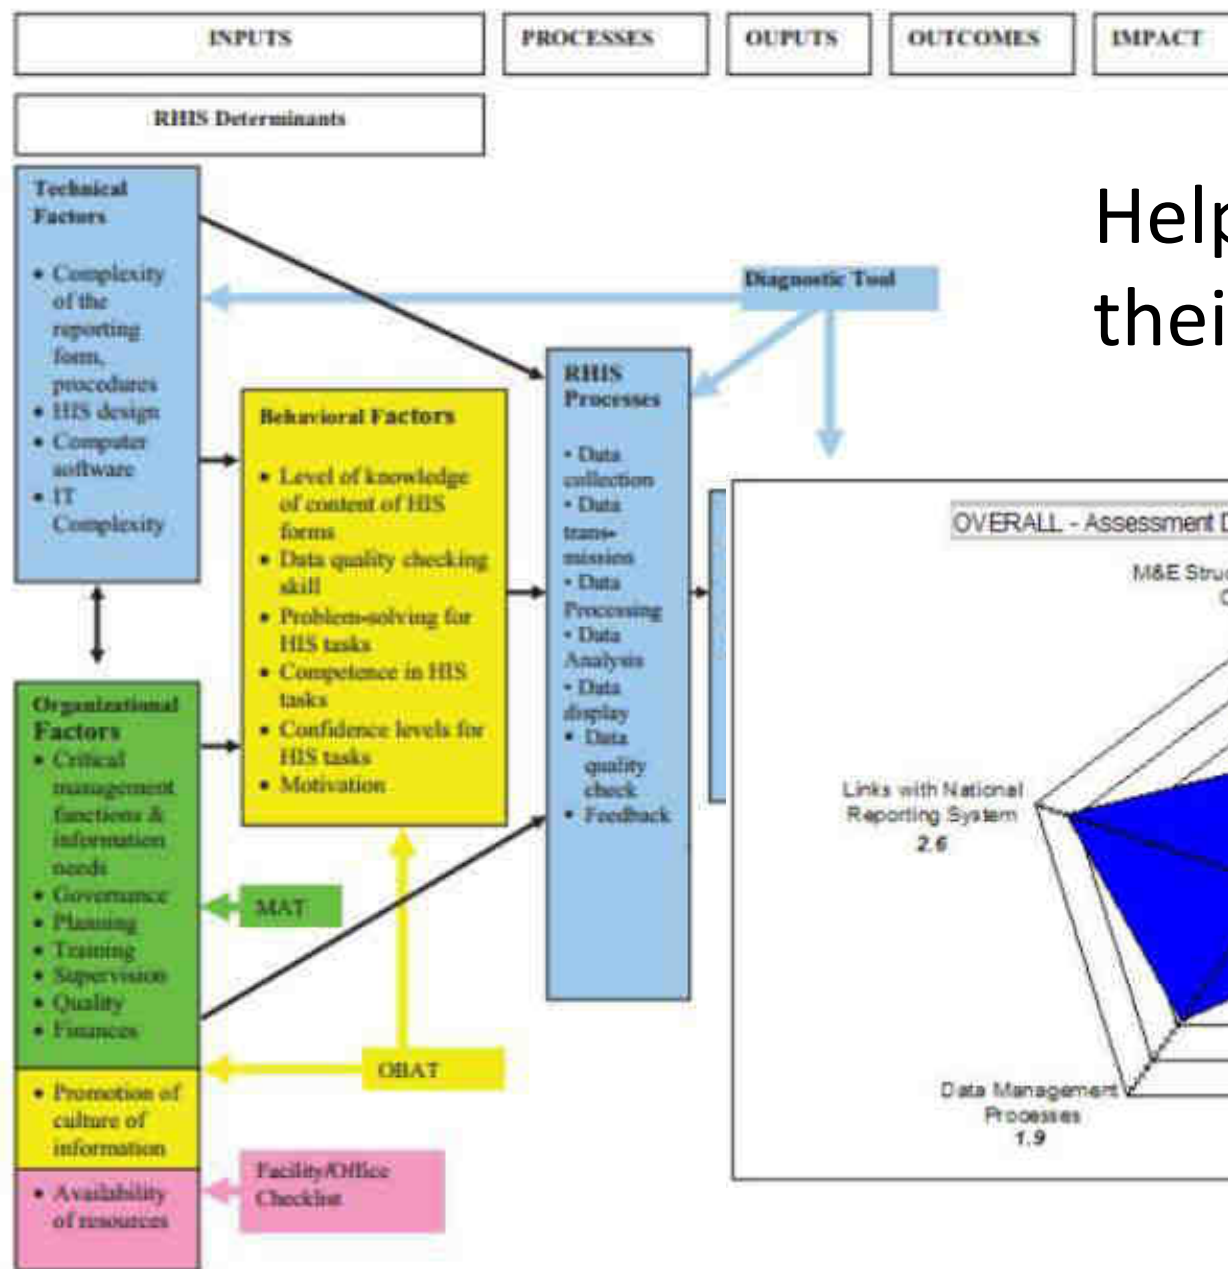

- HIS Management
- Systems thinking
- Gender equity
- Data quality
- Data analysis
- Geographic analysis
- Data visualization
- Informatics
- Data ethics
- Community based info systems
- OVC
- Key populations
- Costing
- Capacity building
- Knowledge management

What MEASURE does

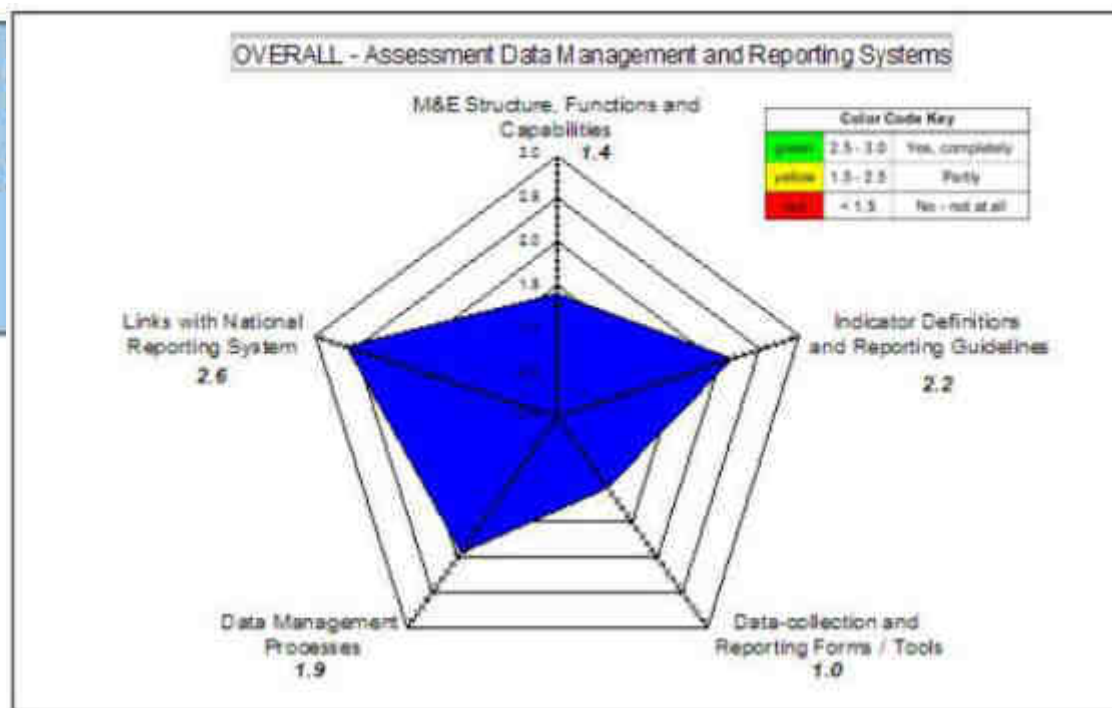

Our siblings and collaborators

- Other USAID projects
 - Demographic Health Surveys
 - Linkages (Key populations)
 - DELIVER (Supply chain)
- CDC: Disease surveillance
- Global Fund
- Gates Foundation
- UN/WHO

What MEASURE does

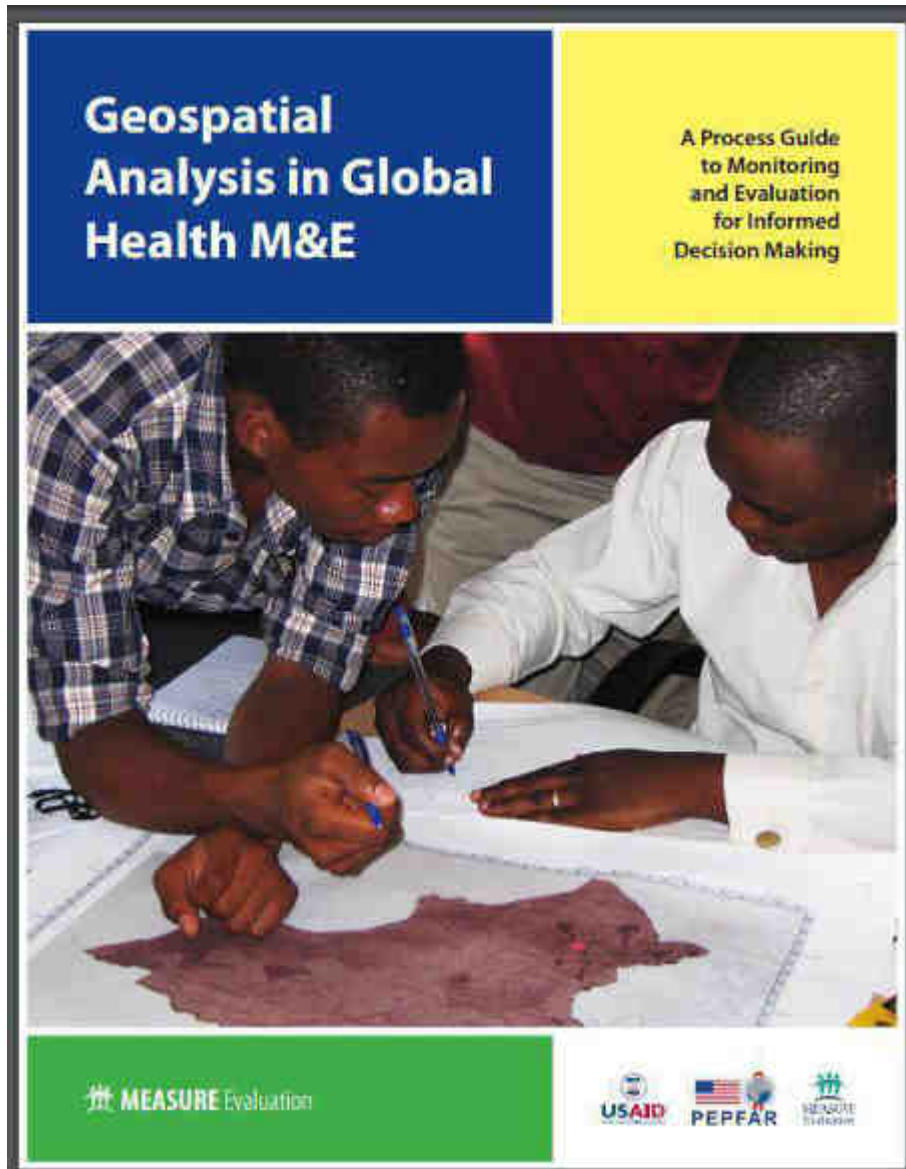

Helps countries strengthen their information systems

What MEASURE does

Develops and
disseminates resources

What MEASURE does

Participates in setting global agendas

What MEASURE does

Conduct evaluations

What MEASURE does

Evaluates itself

What MEASURE does

Builds capacity to build capacity

Challenges: Home grown

- Changing agendas
- Donor fatigue
- Desire for quick results
- Bias for innovation over infrastructure

Challenges: In the field

- Unrest and terrorism

Challenges: In the field

- Unrest and terrorism
- Human resource migration
- World demand for indicators
- County ownership
- Evaluation through HIS

Evaluation: MEASURE portfolio

- 46 current evaluations
- Bangladesh: Maternal Mortality Survey to monitor MDG-5.
- Kenya, Uganda, Tanzania, Rwanda, Burundi: Evaluation of East Africa Cross-Border Health Integrated Partnership
- Nepal: Evaluation of gender and social inclusion capacity strengthening interventions with health facility management committees

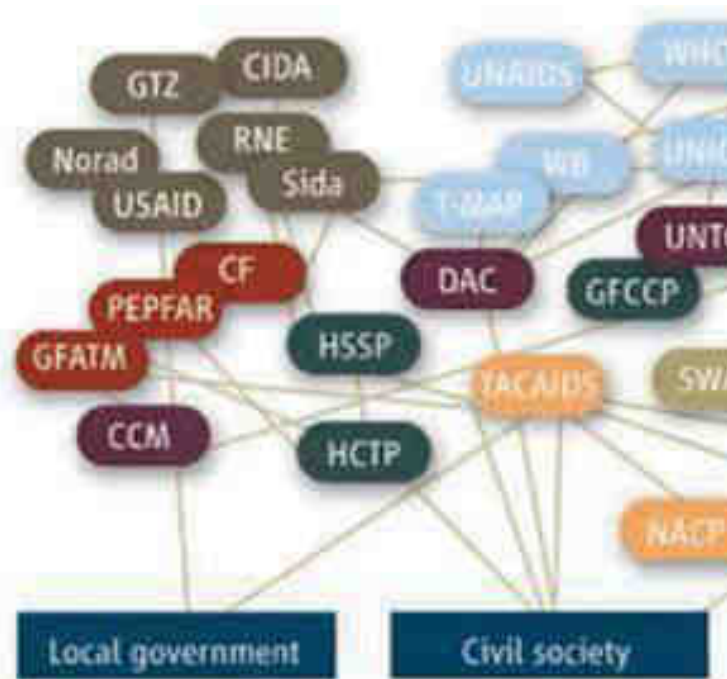

Evaluation: Complexity

Characteristics of complexity

- Many stakeholders
- Factors all affecting each other
- Nonlinear, feedback loops
- Time lags
- Unpredictability, emergence
- Context-specific, lacking a counterfactual

Evaluation: Networks

Many stakeholders

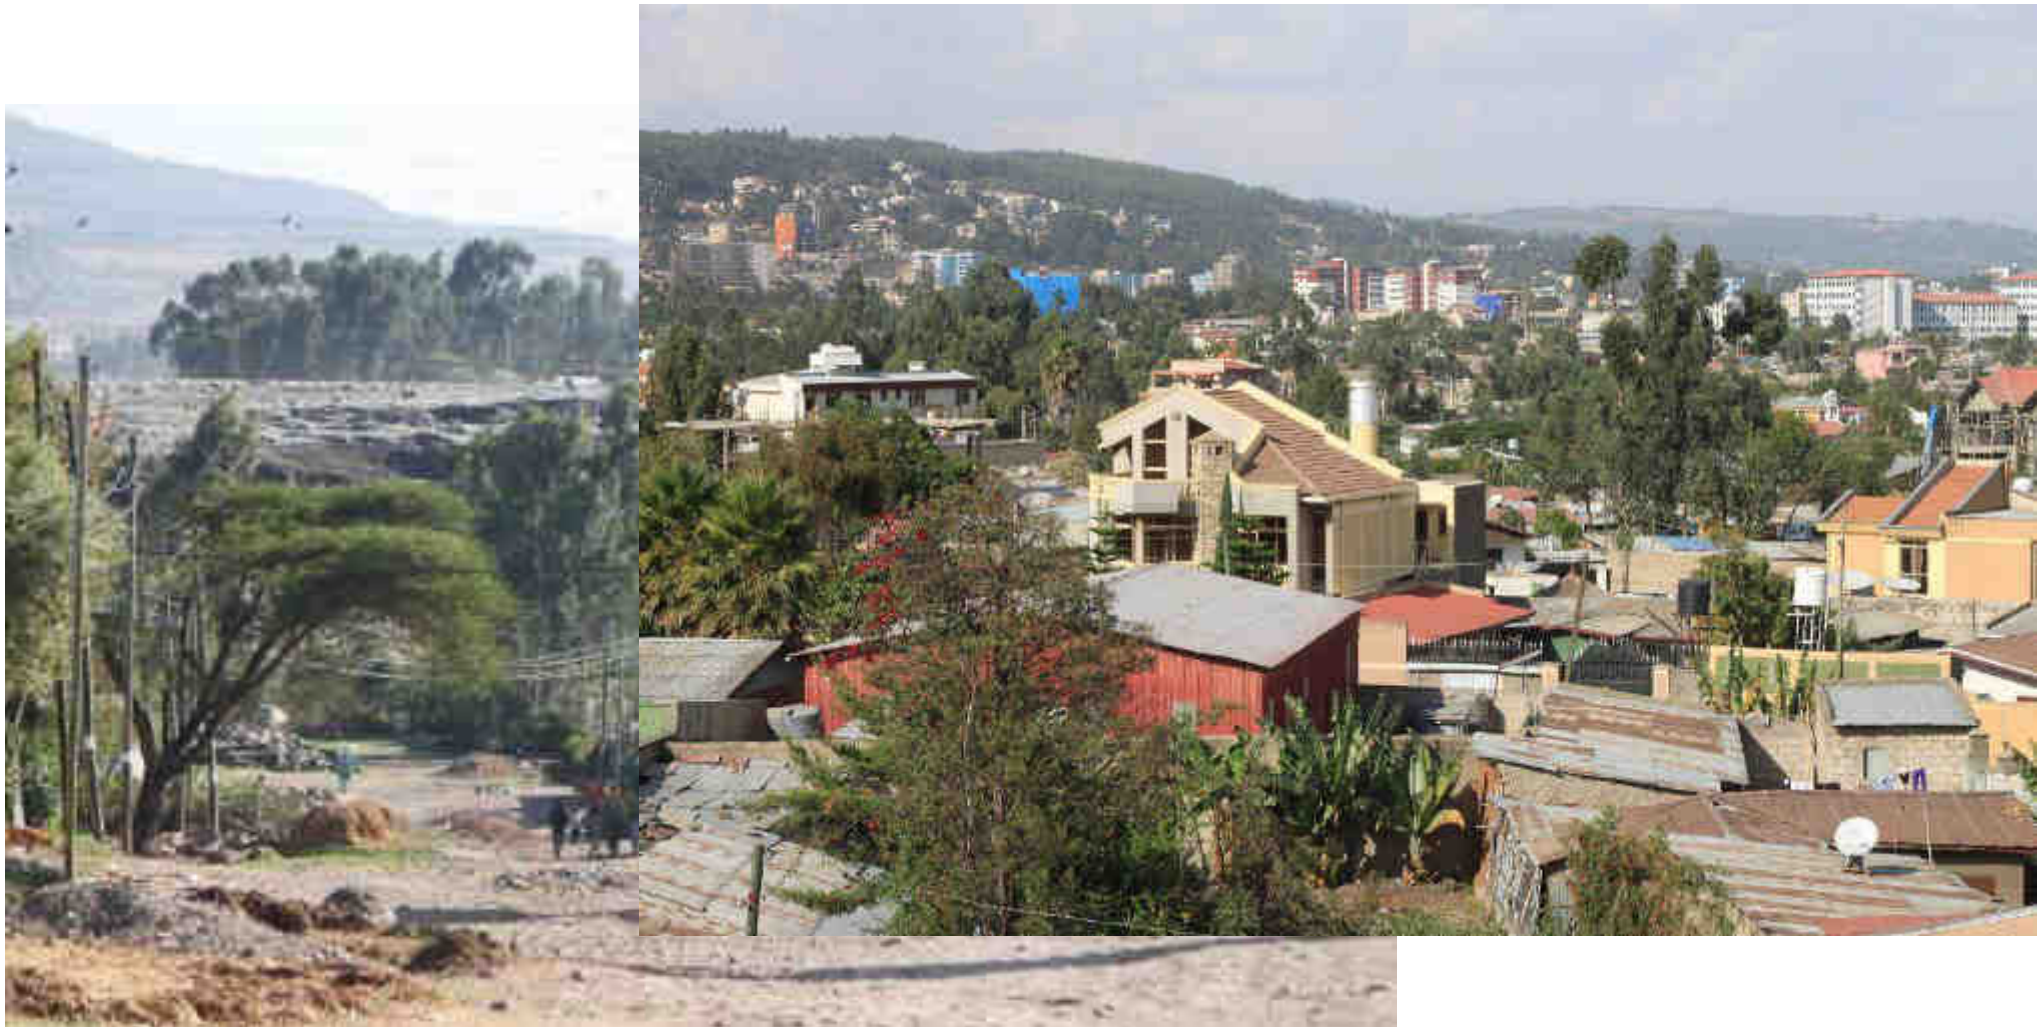

Relationships Between Various Stakeholders in Tanzania

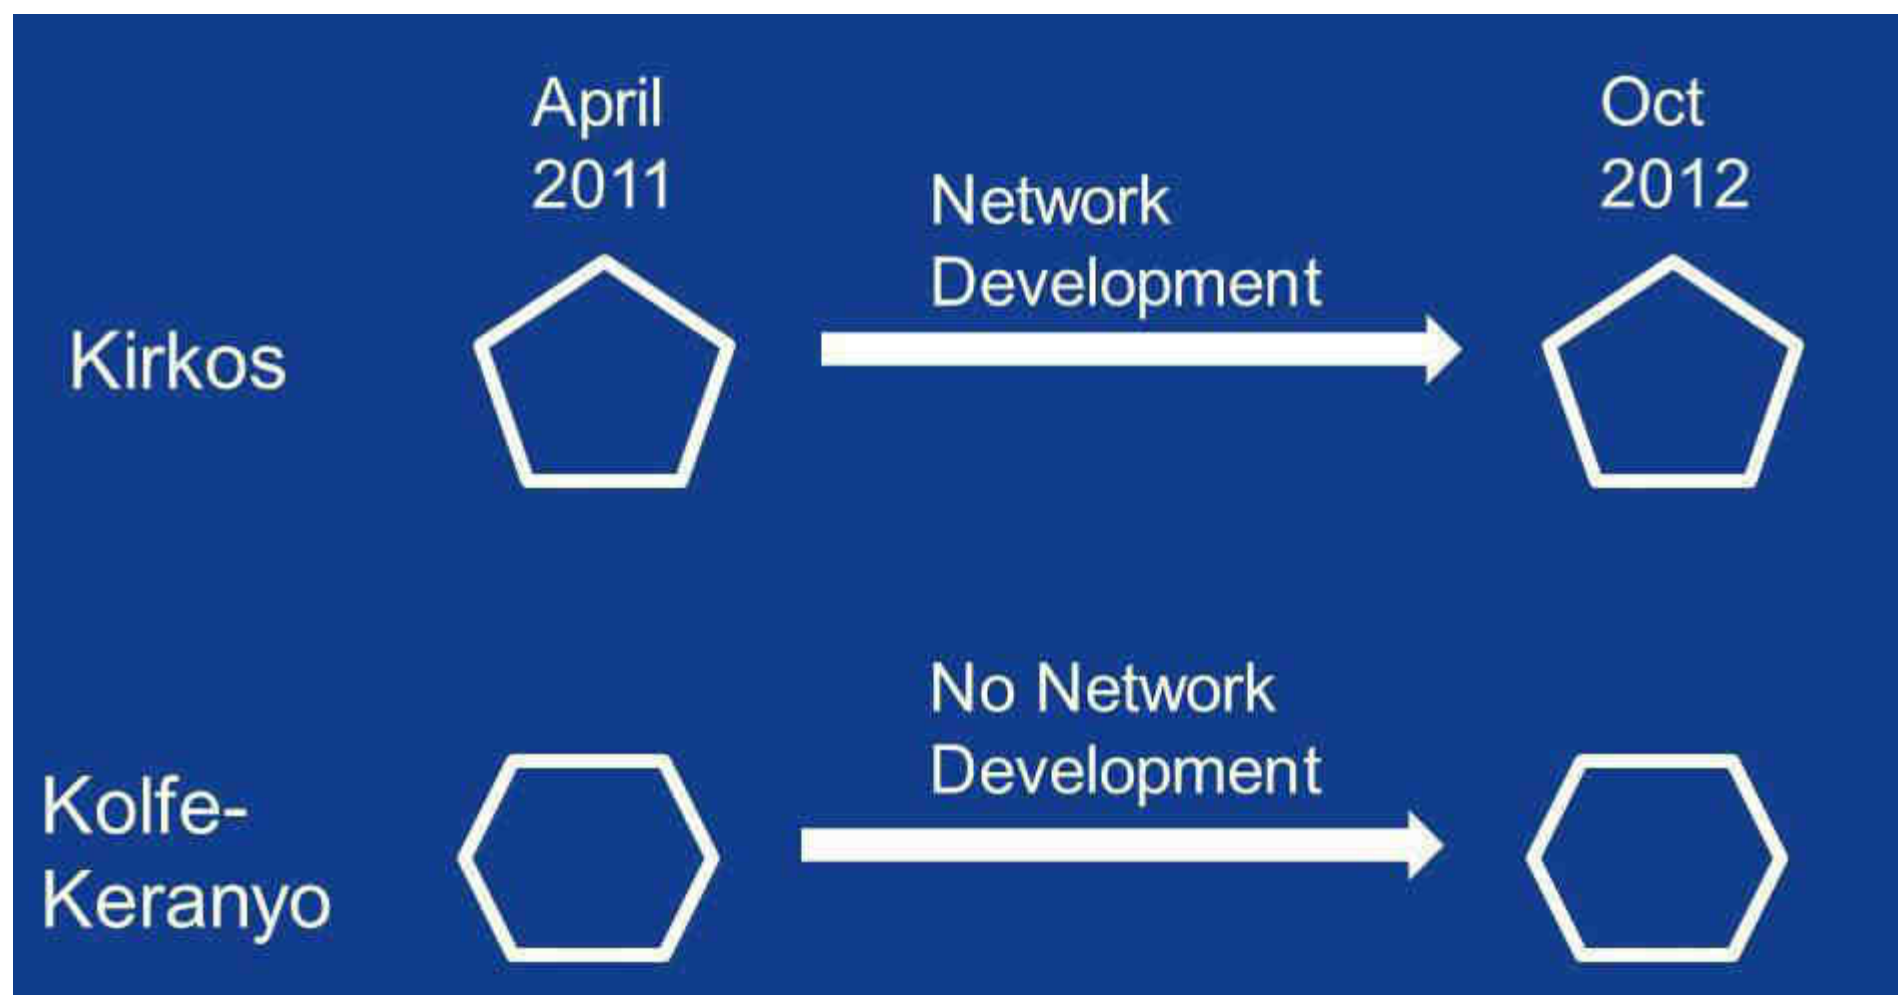

Evaluation: Networks

Addis Ababa

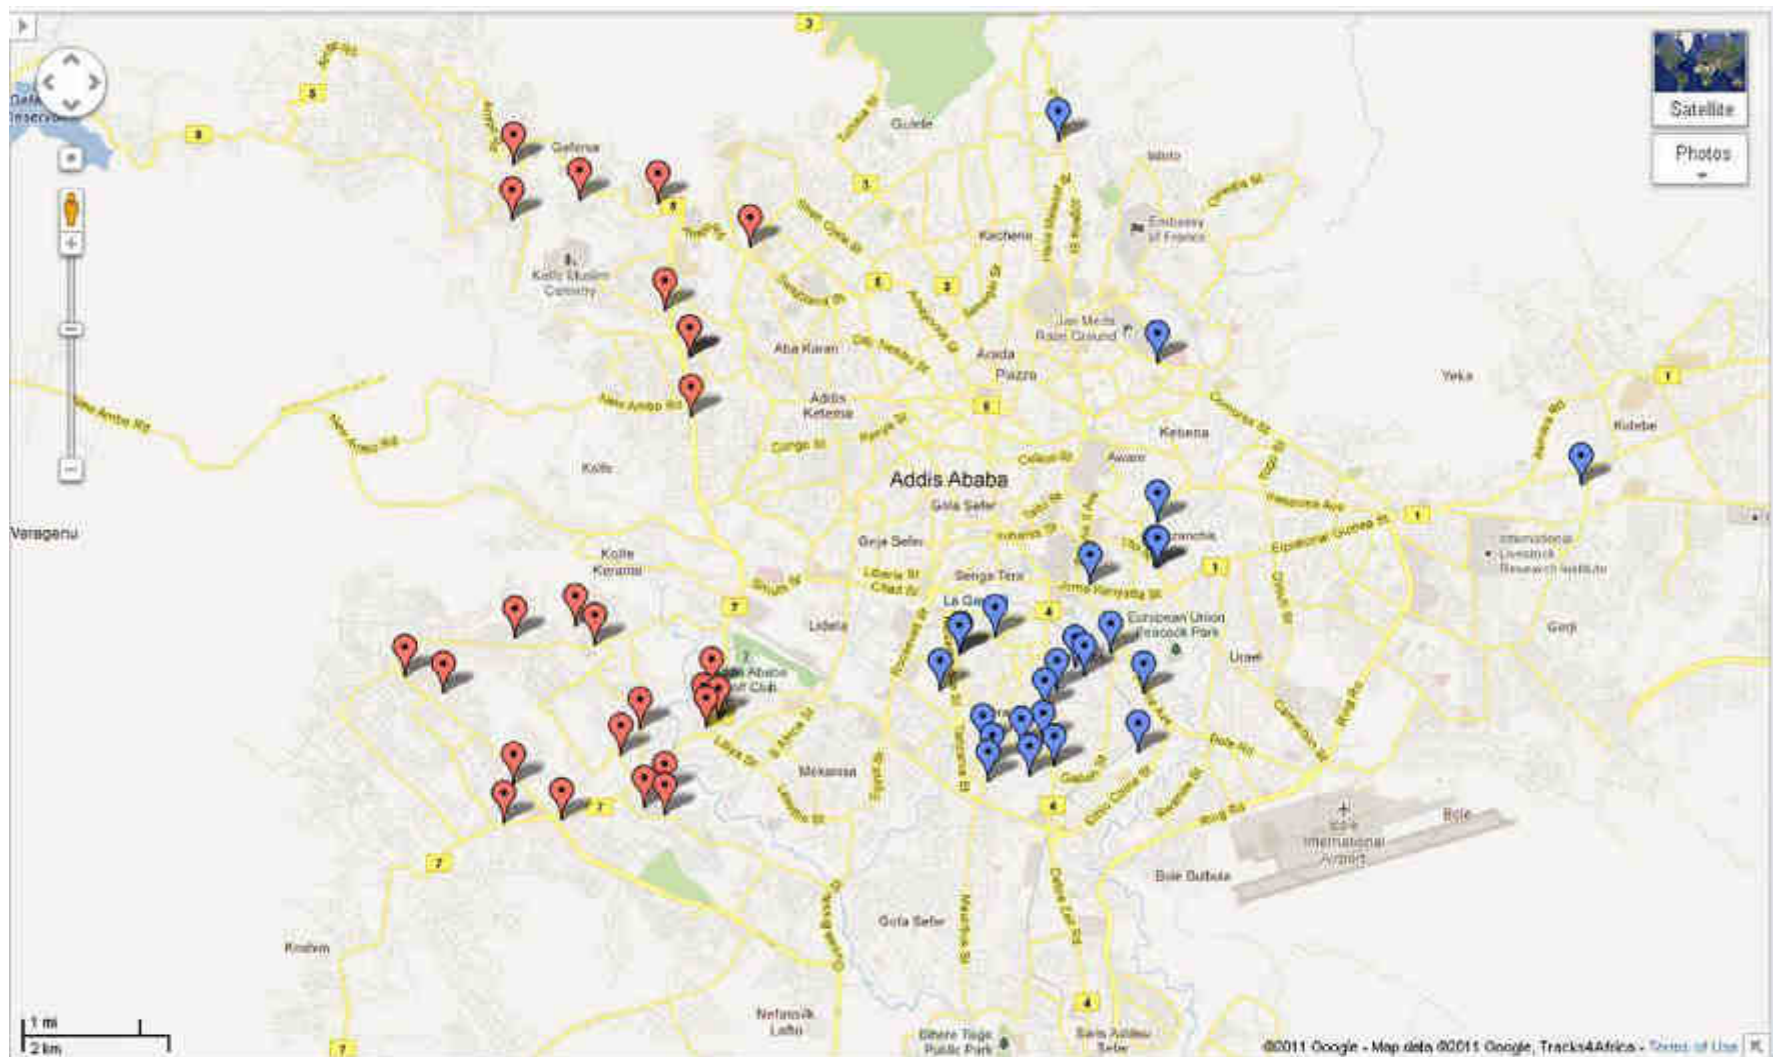

Evaluation: Networks

Needed Services: Nutrition

Needed Services: Social

Evaluation: Complexity Resources

Discussion Note

Complexity-Aware Monitoring

USAID typically uses a specific approach to monitoring, reform monitoring uses indicators designed to measure results that are frameworks or project Logframes. Annual (or semi-annual) re data is intended to inform high-level decision making. At the p to inform implementation. Performance monitoring practice i and comparing actual figures to targets. (For more inform monitoring, please see the Automated Directives System section

Outside the Agency, the term "monitoring" may be used to de roots in diverse theoretical perspectives. For example, m necessarily involve results, indicators, baselines or targets.

This discussion note outlines general principles and promising USAID development assistance. Complexity-aware monitoring practiced in USAID and is intended to complement performan of projects and strategies. Complexity-aware monitoring may working in other organizations or contexts. Nevertheless, co may strengthen practice.

This Discussion Note is designed to prompt inquiry and explore methods for monitoring complex aspects of development assist approaches, this note highlights principles and methods used by Developed in consultation with outside experts in the principles and are already experimenting with new MSE methods. It is a starting methods that suit some aspects of their portfolio better than ge After a period of experimenting with and learning how these metho content, this Discussion Note may be turned into a How-To or toolkit.

This publication was produced for review by the United States prepared by Heather Sims for DevTech Systems, Inc., under C expressed in this publication do not necessarily reflect the view Development or the United States Government.

10. Conclusion

1 PURPOSE

To be useful—and used—data initiatives must reflect the needs and values of relevant stakeholders.

Since such large amounts of money and effort are being devoted to collecting data from health facilities, communities and populations, maximizing the impact of that data for real-world benefits is essential. This is where the Stakeholder Engagement Tool is so valuable.

Data is only valuable if it is seen as relevant and useful by prospective users. When data is seen as useful, it is more likely to be 'owned' by those who need it to inform decision making.

For data ownership to be built, the appropriate set of stakeholders needs to be identified and involved when proposing, designing, implementing, and reporting on research and monitoring and evaluation (M&E) initiatives.

- Who tends to use the data, and what questions are they seeking to answer?
- Who has influence and resources that can be brought to bear to aid this project?
- Who will be directly or indirectly affected by the outcome of this initiative?
- Who will support our plan? Who will oppose it? Why? How do we deal with it?
- What each of these individuals contribute to the process?

Effective stakeholder analysis answers these questions in a way that significantly improves a project's design and outcomes.

Yet, typically, stakeholder analysis is done informally, in an ad hoc way. The rationale behind choosing and engaging stakeholders is rarely consistent, systematic, or documented. A researcher may talk to people to identify stakeholders and their roles, but the process is intuitive rather than systematic, and it rarely happens the same way twice. As a result, the following scenarios are typical:

- Only those stakeholders in agreement with the proposed plan are invited to participate.
- Stakeholders are selected only from the organization that is directly involved in the project.
- Stakeholders are invited to a preliminary briefing, but they are not included thereafter in project design.
- The process includes only the bare minimum number of stakeholders required to obtain formal approvals.
- Stakeholders included in the project may not be at the appropriate level in a community or organization to contribute to the project or make decisions.
