The call for an integrated approach to health problems is increasing worldwide, but the implementation of One Health approaches in policy making is still limited.

Advantages of One Health compared to current approaches are identified more often in theory than in real cases.

Evaluation of policy measures on rational basis can provide arguments to identify the added value of OH.
Traditional approaches to evaluation

Current policy evaluation tools adopt sectoral rather than multi-sectoral perspectives and often reflect disciplinary vision.

They usually miss the link among sectors and with the socio-economic context where added values and costs appear.
A renewed evaluation framework for OH

Multiple dimensions of OH

Mutual links among sectors

Socio-economic context

System approach

Interdisciplinarity

Team work

Policy evaluation: a One Health approach 3
NEOH: a living lab for OH evaluation

NEOH (Network for the Evaluation of One Health) brings together people from various disciplines to elaborate a OH evaluation framework
